## Challenges for a Precision Engineer

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	<b>Design goals</b>	<b>3</b>
1.2	<b>Definitions</b>	<b>4</b>
1.2.1	Degrees of freedom	4
1.2.2	Target	5
1.2.3	Tolerance and allowance	5
1.2.4	Accuracy, reproducibility and precision	6
1.2.5	Resolution	7
<b>2</b>	<b>Physical phenomena</b>	<b>9</b>
2.1	<b>Physical phenomena that influence precision</b>	<b>9</b>
2.2	<b>Compliance and stiffness</b>	<b>9</b>
2.3	<b>Shortening effect</b>	<b>10</b>
2.4	<b>Thermal effect</b>	<b>12</b>
2.5	<b>Play</b>	<b>14</b>
2.6	<b>Friction</b>	<b>15</b>
2.6.1	Stick, slip and spin	15
2.6.2	Coefficient of friction	16
2.7	<b>Vibrations</b>	<b>19</b>

<b>2.8</b>	<b>Combined phenomena</b>	<b>21</b>
2.8.1	Hysteresis . . . . .	21
2.8.2	Virtual play . . . . .	22
2.8.3	Hysteresis due to vibration and friction . . . . .	24
2.8.4	Micro-slip and creep . . . . .	24
2.8.5	Rolling resistance . . . . .	29

## Toolbox for a Mechanical Engineer

<b>3</b>	<b>Modelling</b> . . . . .	<b>33</b>
3.1	<b>Goals of modelling</b>	<b>33</b>
3.2	<b>Types of models</b>	<b>34</b>
3.3	<b>Use of models</b>	<b>34</b>
<b>4</b>	<b>System stiffness</b> . . . . .	<b>37</b>
4.1	<b>Parallel and series</b>	<b>37</b>
4.2	<b>Transmission ratio</b>	<b>39</b>
4.2.1	Translation to translation . . . . .	39
4.2.2	Rotation to rotation . . . . .	40
4.2.3	Translation to rotation . . . . .	42
4.2.4	Rotation to translation . . . . .	43
4.2.5	Effects of transmission ratio . . . . .	43
4.3	<b>Energy method</b>	<b>43</b>
<b>5</b>	<b>Element stiffness and loadability</b> . . . . .	<b>49</b>
5.1	<b>Elements subjected to a single load</b>	<b>49</b>
5.1.1	Axial force . . . . .	49
5.1.2	Bending moment . . . . .	50
5.1.3	Transverse force . . . . .	50
5.1.4	Torsion . . . . .	53
5.2	<b>Elements subjected to multiple loads</b>	<b>60</b>
5.2.1	Transverse force and bending moment on two sided clamped beam	60
5.2.2	Transverse force on simply supported beam . . . . .	61
5.2.3	Eccentric axial force on cantilever beam . . . . .	62
<b>6</b>	<b>Contact stiffness and loadability</b> . . . . .	<b>65</b>
6.1	<b>Introduction</b>	<b>65</b>

<b>6.2</b>	<b>Approximating stiffness and loadability</b>	<b>67</b>
6.2.1	Transferring variables to a set of parameters . . . . .	67
6.2.2	Stresses, deformation and stiffness for elliptical contact areas . . . . .	69
6.2.3	Stresses, deformation and stiffness for rectangular contact areas . . . . .	71
<b>7</b>	<b>Static characteristics</b> . . . . .	<b>73</b>
<b>7.1</b>	<b>Schematic representation of systems</b>	<b>73</b>
7.1.1	Introduction . . . . .	73
7.1.2	Element as springs . . . . .	73
7.1.3	Connection with and without play . . . . .	73
7.1.4	Object with friction . . . . .	73
<b>7.2</b>	<b>Graphical representation of static behaviour</b>	<b>74</b>
7.2.1	Static characteristics of basic elements . . . . .	74
7.2.2	Characteristics of basic systems . . . . .	76
7.2.3	Virtual play in systems with multiple springs . . . . .	81
7.2.4	Hysteresis in a clamped joint . . . . .	81
7.2.5	Hysteresis in a bolted joint . . . . .	85
<b>8</b>	<b>Design for degrees of freedom</b> . . . . .	<b>87</b>
<b>8.1</b>	<b>Degrees of freedom</b>	<b>87</b>
8.1.1	Definition of degrees of freedom . . . . .	87
8.1.2	Internal Degrees of Freedom . . . . .	87
8.1.3	Scope . . . . .	88
<b>8.2</b>	<b>Exact-constraint design</b>	<b>89</b>
<b>8.3</b>	<b>Constraint-based design</b>	<b>91</b>
8.3.1	Overview of basic elements for constraining . . . . .	92
8.3.2	Examples for constraining using multiple elements . . . . .	96
8.3.3	Analysing degrees of freedom . . . . .	97
8.3.4	Designing degrees of freedom . . . . .	97
8.3.5	Degrees of freedom exercises . . . . .	98
8.3.6	Intermediate Body . . . . .	99
8.3.7	Thermal Center . . . . .	99
8.3.8	Other methods for analysing degrees of freedom . . . . .	100
<b>8.4</b>	<b>Adding redundant constraints</b>	<b>101</b>
	<b>Bibliography</b> . . . . .	<b>103</b>
